

제가 없을 때 IsaacLab 시뮬레이션 실행하는 방법

1. Visual Studio Code 열기

2. 터미널에서 isaacrab 환경 활성화

conda activate env_isaacrab

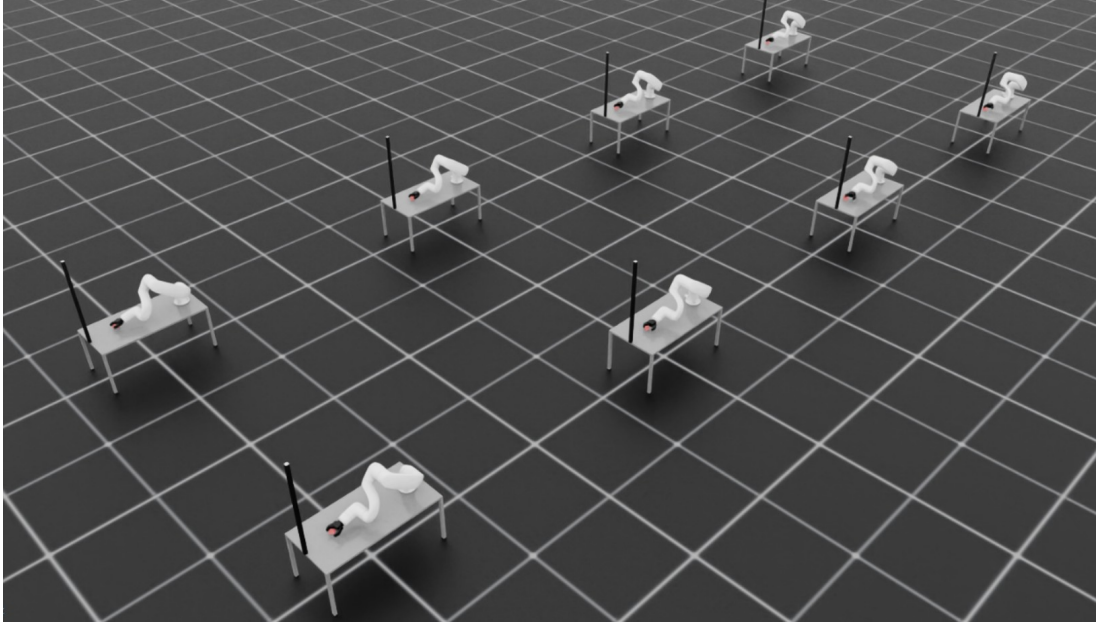

```
• (base) user@user-Vector-16-HX-AI-A2XWIG:~/practice$ conda activate env_isaacrab
○ (env_isaacrab) user@user-Vector-16-HX-AI-A2XWIG:~/practice$
```

3. 아래 명령어를 입력하여 내가 마지막으로 작업한 결과 확인

```
python scripts/rsl_rl/play.py \
  --task Template-Practice-Direct-v0 \
  --num_envs 8 \
  --checkpoint /home/user/practice/logs/rsl_rl/Doosan_pick_and_place/2026-02-03_17-20-41/model_1999.pt
```

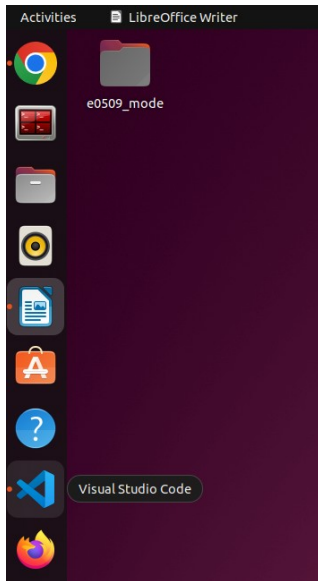

```
○ (env_isaacrab) user@user-Vector-16-HX-AI-A2XWIG:~/practice$ python scripts/rsl_rl/play.py -
-task Template-Practice-Direct-v0 --num_envs 8 --checkpoint /home/user/practice/logs/rsl_
rl/Doosan_pick_and_place/2026-02-03_17-20-41/model_1999.pt
```

4. 아래와 같은 화면이 보이면 정상적으로 실행된 것임

How to start isaacsim simulation when I'm gone:

1. open visual studio code

2. activate the isaacsim environment in the terminal:

```
• (base) user@user-Vector-16-HX-AI-A2XWIG:~/practice$ conda activate env_isaacsim
○ (env_isaacsim) user@user-Vector-16-HX-AI-A2XWIG:~/practice$
```

3. type in the following command to see the latest work I've done:

```
python scripts/rsl_rl/play.py --task Template-Practice-Direct-v0 --num_envs 8 --checkpoint
/home/user/practice/logs/rsl_rl/Doosan_pick_and_place/2026-02-03_17-20-41/model_1999.pt
```

```
○ (env_isaacsim) user@user-Vector-16-HX-AI-A2XWIG:~/practice$ python scripts/rsl_rl/play.py -
-task Template-Practice-Direct-v0 --num_envs 8 --checkpoint /home/user/practice/logs/rsl_
rl/Doosan_pick_and_place/2026-02-03_17-20-41/model_1999.pt
```

4. this is what you should be seeing:
